Fitting the throttle cable: Start by removing the airbox filter and the lower part of the airbox.

WARNING! Risk of serious injury.

Before adjusting the throttle cable tension on the engine: Turn the ignition to OFF and close the fuel valve.

Always start the machine from the operator's station. Always turn off the machine before adjusting the tension of the throttle cable on the engine side.

WARNING! Risk of burn injuries. The engine and its silencer become very hot during operation and after the engine has been shut down.

Allow the engine and silencer to cool before servicing or performing maintenance on the machine.

8 THROTTLE ADJUSTMENT

- Start by adjusting the throttle cable at the throttle handle so that you have equal adjustment travel in both directions **(1)**
- Attach the other end of the cable housing to the clamp on the engine **(2)**
- Then release the nut holding the throttle control **(3)** in place.
- Screw the cable into the nipple **(4)**. Make sure that the throttle is in the neutral/unaffected position when doing this.
- Check that you have 1 to 3 mm of clearance in the throttle handle, and that the cable moves freely. Adjust the cable tension at the throttle handle **(1)**, if necessary
- Start the engine and check that it is idling and that the saw blade does not move while the throttle handle is in idle position. Adjust the cable tension at the throttle handle **(1)**, if necessary
- Secure the adjustment using the locking nuts **(5)**

WARNING! Risk of serious injury.

! The hinge switch for the machine has to be fitted before commissioning the machine.

! Always switch off the machine from the operator's position before working on the saw head.
